

XCS224N Natural Language Processing with Deep Learning

Course Syllabus

Welcome

Welcome to XCS224N Natural Language Processing with Deep Learning! This professional course is based on graduate-level material from Stanford's on-campus course, CS224N, adapted for a professional certificate format.

- Learn from Stanford graduate lecture videos that have been edited and segmented by topic for easier navigation, reference, and review.
- Complete guided homework assignments implementing content covered in the course lectures.
- Receive support from Stanford-affiliated Course Facilitators.
- Connect to a cohort of peers from diverse locations and professional backgrounds.

Course Platforms and Tools

CGOE Learning Management System: accessed via the [mystanfordconnection](#) site which you used to enroll in this course.

GitHub: to distribute code and data for the assignments.

Slack: for additional course support and class discussions.

Azure Lab Services: cloud computing resources for assignments 4 and 5.

Important Dates

- May 30 afternoon Pacific Time: Slack and GitHub invites sent (Accept within 7 days)**
- Did not receive the Slack invite and it's **not in your spam?**
 - <http://XCS224n.slack.com/>
 - I have a Guest Account
 - Log in using your credentials
 - Did not receive the GitHub Invite?
 - Email xcs224n-staff@stanford.edu
 - Let us know if you'd like to receive the invite to a different email
- June 2 noon Pacific all lecture videos become available.**
- Log in to your [mystanfordconnection](#) account
 - Click on the link titled "Course Videos and Assignments"
 - Here is a video on how to navigate the course portal.
- June 2 evening Pacific Time Course Facilitator connection emails sent out to learners.**
- Course Facilitators serve as your primary point of contact for content and assignment related questions
- June 20 at 5:00pm PST Drop/Transfer Deadline**

Deadlines and Pacing

Course Start: June 2

Course End: August 10

Below is a *suggested* pacing guide. Please, note the assignment deadlines (all **11:59 PM Pacific**).

Week	Suggested Videos	Assignments		
		Release Date	Regular Deadline	Late Deadline
1&2 Jun 2 - Jun 15	Word Vectors Neural Network Learning	June 2	Assignment 1 June 15	
3&4 Jun 16 - Jun 29	Dependency Parsing Knowledge RNNs and Language Models		Assignment 2 June 22	Assignment 1 June 20 Assignment 2 June 27
5&6 Jun 30 - Jul 13	Neural Machine Translation and Attention Transformers and Pretraining Prompting, RL from Human Feedback		Assignment 3 July 6	Assignment 3 July 11
7&8 Jul 14 - Jul 27	Natural Language Generation Coreference Resolution Integrating Knowledge in Language Models		Assignment 4 July 20	Assignment 4 July 25
9&10 Jul 28 - Aug 10	Model Analysis and Explanation Improving NLP Models Guest Lectures (Optional)		Assignment 5 August 10	Assignment 5 August 15

Late Deadlines and Penalty Waiver

Late Deadlines: All assignment submissions can be turned in up to five days late and are assessed a penalty of -1 point per late day. After five days, the submission link will close, and entries will no longer be accepted.

Penalty Waiver: You have the option to remove late penalty points from any one assignment.

A link to request a late penalty waiver will be made available **two weeks** before the course ends. To submit a request, please complete the Google Form. Be sure to use the same email address you used when enrolling. All waiver requests will be reviewed and applied at the conclusion of the course.

Assignments and Grading

[Here is a short description of each assignment.](#)

Coding Questions: are graded automatically upon upload and can be submitted up until the late deadline. [Click here for an example.](#)

Written Questions: will be manually graded by Course Facilitators no later than one week after the assignments 'on-time' deadline. [Click here for an example of the submission process.](#)

Note: the final project has been removed in the adaptation of the course to a professional format.

Learners may submit regrade requests on Gradescope within one week of the assignment grades being posted in cases of clear grading errors, such as miscalculations.

Certificate Requirements

The course is pass/no-pass, and no letter grades are granted. To pass the course, you must achieve a total score of 70% or higher on the assignments. Upon successful completion, you will receive a digital course certificate.

- There are a total of 200 base points (meaning 140 to achieve 70%).

Deliverable	Regular Points	Extra Credit Points
A1	24	5
A2	29	5
A3	34	-
A4	49	-
A5	64	15
Assignment total	200	
Extra Credit Total	-	25
Minimum Passing Total	140 (70% of Regular Total)	

Note: Course certificates will only be sent at the end of the course.

Course Facilitators and Support

We encourage posting any class/content related questions in relevant Slack channels. This way, you'll likely get a faster response from either the course staff or your classmates. However, before you post, make sure you're familiar with the important [course policies](#).

Additionally, starting from the first day of the course, you'll be connected to a Course Facilitator (CF), who will be your primary point of contact for content and assignment inquiries. They'll each lead a smaller group of learners, providing personalized support. Your Course Facilitator will keep you informed about important reminders and their availability for questions, potential online office hours, and 1:1 sessions.

Note on Code Assignments and Debugging

While the course team is here to support your experience, it is ultimately your responsibility to write, test, and debug your own coding assignments. Before reaching out to a CF or posting your question in Slack, it's expected that you have taken the reasonable step of performing an analysis yourself. CFs may view and provide guidance on your work; however, they will not provide exact answers on what to insert into your assignments. This policy is meant to ensure that you leave the course having mastered the material and enables CFs to focus on questions where their guidance is most impactful.

Drop/Transfer Policy

We don't want to see you go, but if you decide this is not the right course or time, there are two available options: either **drop** the course OR **transfer** to the next iteration of this course/another course within the AI Professional Program. All learners have the option to transfer a total of (1) time per course for their duration in the program. Once this one-time transfer is used for a particular course, no additional transfer requests for that specific course will be accepted. To request a drop or transfer, email ai-drop-transfer@stanford.edu Please include the course number and request type (drop or transfer) in the subject line to ensure your request is processed correctly.

Up until June 2

No cost for drop/transfer. If you drop, you will get a full refund.

Up until June 20

Once the course has begun, there will be a drop/transfer fee of \$200, i.e.: If you request a drop, you will be reimbursed 100% of your tuition minus \$200. If you request a transfer, there will be a \$200 fee in the form of an invoice.

Important Note: No tuition refunds will be issued after the third week of the course.

Important Policies

Honor Code

Students will be asked to review and maintain the standard set forth by the [Stanford Honor Code](#) when completing quizzes and assignments in this course. You can review the section labeled 'Violations of the Honor Code' for representative examples relevant to this course.

Students are strongly encouraged to form study groups, discuss, and work on homework problems in groups, and help each other; However, each student must write down the solutions independently and cannot refer to written notes from the joint session. **In other words, you must understand the solution well enough in order to reconstruct it independently.** Further, because we occasionally reuse assignment questions from previous years, you are expected not to copy, refer to, or look at the solutions in preparing your answers. It is an honor code violation to intentionally refer to a previous year's solutions

After completing this course, you are welcome to share your experience and credentials with others; however, **it is considered a violation of the honor code to share assignment solutions including on public platforms such as GitHub.** Faculty in the computer science department have strongly encouraged us to refrain from posting solutions for assignments, thus we ask that you **DO NOT** share the exact code.

Note on LLM Usage

Students are required to independently submit their solutions for AI Professional homework assignments. Collaboration with generative AI tools, such as Co-Pilot and ChatGPT, is allowed, treating them as collaborators in the problem-solving process. You may use these tools for guidance, but **you may NOT directly ask for answers or copy solutions, and you must acknowledge Generative AI tools as collaborators in your submission whenever used.** If you do consult an AI tool, use **critical judgment** and evaluate the output carefully. Ultimately, we want you to learn and develop your skills. **Employing AI tools to substantially complete assignments is prohibited and will be treated as a violation of the Honor Code Policy, which may result in dismissal from the course.** We will actively monitor homework submissions to enforce this policy. For additional details, please refer to the [Generative AI Policy Guidance](#).

For more information and examples on LLM usage, please [Click Here](#).

Communication Guidelines

One of the benefits of this course is the opportunity to network with other course participants, to create study groups and to engage with course staff. We encourage this kind of interaction and want to make sure that it is a positive experience for everyone. It is imperative that no course participant is made to feel uncomfortable or their ability to learn or otherwise benefit from the course is impeded by the actions of another participant. Please use good judgment. Keep all interactions professional and focused on coursework or career networking. Maintain respect in all your interactions by using polite language, avoid using offensive language and be considerate of your colleagues' preferences regarding direct messaging. Please respect and uphold the rights and dignity of others regardless of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or socio-economic status. Our team is always available either in Slack or via email, so please feel free to reach out to us if you have any questions or concerns.

You can review Stanford Online's [terms of service](#) here, including rules for online conduct.
